Where is the eject button on my macbook air

It's been a while since Apple has offered Macs with built-in optical drives that could make use of a CD or DVD. The last models were the 2012 Mac Pro and the mid-year 2012 non-Retina 15-inch MacBook Pro. Maritsa Patrinos / Lifewire Apple first removed the optical drive in the 2008 MacBook Air, and by the end of 2013, all built-in optical drives were gone from the Mac lineup. That doesn't mean there isn't a demand for optical drives or the CDs or DVDs that are used in them. That's why external optical drives are a popular peripheral for many Mac users. Whether you have an older Mac that has a built-in optical drive or an external drive, you can eject a CD or DVD in several ways. The Mac, unlike most Windows PCs, doesn't have an external eject button on its CD/DVD drive. Instead, Apple made use of the ability of optical drives to respond to an open or close command sent over the drive's electrical interface. By using the open and close commands, the Mac offers several options for ejecting a CD or DVD. Some Apple keyboards have an eject key, usually located in the upper right corner of the keyboard. Press the Eject key to eject the CD or DVD from the drive. On any keyboard, including those originally designed for use with a Windows PC, press and hold the F12 key until the CD or DVD is ejected from the drive. This may take several seconds. Locate the desktop icon for the CD or DVD. Click and hold on the icon and drag it to the trash. You'll notice that the trash icon changes to an Eject symbol as the CD or DVD icon is positioned over the trash. One of the quickest ways to eject a CD or DVD is to right-click on its desktop icon and select Eject from the pop-up menu. Some applications, such as Disk Utility, have an eject command in a menu or toolbar. Launch the application and use the eject command to eject the CD or DVD. Use the Eject menu applet located in the Mac's menu bar. If you don't see one, you can add a menu bar item to eject a CD or DVD. When all else fails, click and hold the mouse or trackpad button while restarting your Mac. External optical drives typically respond to the seven methods of ejecting a CD or DVD on a Mac, but they also have a few tricks of their own. Most optical drives have an eject button built into the front of the drive's case. Pressing the eject button causes the device tray to open or the optical media to be ejected if it's a slot-loading device.Some external optical drives appear to be missing an obvious eject button, but if you look closely, you'll see a small hole in the front of the case large enough to insert a straightened paper clip into it. Push the paper clip into the eject hole until you feel resistance and then push it a bit further to open the CD/DVD drawer on the optical drive. Your Mac can override the function of the external eject button if it thinks the optical disc is in use. You can get around this problem by first quitting the app that is using the optical drive and then using the external eject button. If the external optical drive still won't eject the disc, shut down your Mac and try using the drive's eject button. After the disc is ejected, you can restart the Mac. External optical drives are usually made from standard optical drives mounted in an external case. The drive can usually be removed from the case. When you remove it, the drive tray may expose the eject hole that was covered up by the enclosure. Then, you can use the paper clip method. When nothing seems to work, it may be time to break out a flat-blade screwdriver. You can force the tray on a tray-based optical drive open with the aid of a prying device. Here's how: Turn off the external optical drive and disconnect it from the Mac. Insert the flat blade screwdriver tip into the lip between the tray and the case of the drive. Gently lever the tray open. You may feel some resistance and hear the sound of gears moving within the drive. Perform this step slowly. Brute force should not be required. When the tray opens, remove the optical media. Close the tray when the task is complete. Thanks for letting us know! Tell us why! Select version: macOS Monterey 12 macOS Big Sur 11.0 macOS Catalina 10.15 macOS Mojave 10.14 macOS High Sierra Modifying this control will update this page automatically You can usually eject a CD or DVD from the desktop or from a Finder window.To eject a disc from your Mac, do any of the following:Eject a disc from the desktop: Select the disc you want to eject, then choose File > Eject [disc].Eject a disc from an optical drive: Press the Eject key .Eject a disc from a Finder window: Click the Finder icon in the Dock to open a Finder window, then in the Finder sidebar, click the Eject button next to the disc's name.Try any of the following:If an app is using the CD or DVD: Quit the app, then try to eject the disc again.If you can't quit the app that's using the CD or DVD: Close the file that is on the disc you want to eject, then try to eject it again.If another user is using the CD or DVD: Log out the users who are using the disc, then try to eject it again.If you can't log out a user: Log in as that user, then try to eject the disc again. If you can restart your computer to eject the disc: Choose Apple menu > Restart, then click Restart while pressing and holding the mouse or trackpad button until the disc is ejected. You can also hold the Option key while restarting your Mac. When you see your CD or DVD appear on the screen, select it, then press the Eject key. Helpful? Thanks for your feedback. Asked by: Miss Chyna Schowalter Score: 4.4/5 (22 votes) The eject key sits in the upper right corner of most modern Apple keyboards. What is the Eject key on a Mac keyboard? Some Apple keyboards have an eject key, usually located in the upper right corner of the keyboard. Press the Eject key to eject the CD or DVD from the drive. On any keyboard, including those originally designed for use with a Windows PC, press and hold the F12 key until the CD or DVD is ejected from the drive.What is eject on Macbook Pro? Ejector is a new macOS app that makes it easy to manage drives w/ your keyboard & Touch Bar. ... With Ejector installed, simply press the eject key on your Mac's keyboard to see a list of all connected volumes. This includes external drives, disk images, network drives, and partitions. Where is the eject icon on Mac? 1. Click on the Finder icon at the bottom left of the screen (the left most icon on the Dock). Click on the Finder icon at the bottom left of the screen (the left most icon on the Dock). Eject external hard drives, memory cards and more by clicking on the Eject icon next to the name of the device in the Finder window. What's eject on Mac? The eject button closes the installer part of the app. It does not uninstall the application assuming you moved the . app to the applications folder. 17 related questions found Mac OS X - Force Ejecting a CD Restart your computer, and hold down the mouse button. If you have a 2 button mouse, hold down the left click. If your computer has an eject key on the keyboard, restart the computer again, this time holding the eject key. Open a Terminal window and type in drutil tray eject. Press and hold the power button to force your Mac to shut down. You can also force shutdown your Mac by pressing the Control+Option+Command+Eject keystroke combination. Command-E. With the volume selected, you can also use the keyboard shortcut Command-E to eject it. In iTunes, you can press "Command-E" or open the "Controls" menu and choose "Eject Disk." In Disk Utility, press "Command-E," open the "File" menu and choose "Eject" or click on the name of the disk in the sidebar and press the "Eject" button at the top of the floating window. Because it's made by Apple it doesn't have any buttons on it, including an eject button. Most new/casual Mac users won't know the drag to eject or context-menu eject methods, so in order to make the drive streamlined with the Mac, they put the eject key on the MacBook Air itself. It's usually represented by a small triangle with a line under it and found on the right side of the drive. Many software programs allow users to eject a CD without having to push the eject button. The eject key sits in the upper right corner of most modern Apple keyboards. Launch Disk Utility (Applications > Utilities) and select the troublesome CD or DVD in the sidebar. Click the Eject button at the top of the window. Restart your Mac and hold down the left mouse button (or trackpad if you have a laptop) as it boots up. Keep pressing it until the login screen or desktop displays. Eject buttons are usually right beside the drive door. Some PCs have eject keys on the keyboard, usually near volume controls. Look for key with an upward-pointing triangle with a horizontal line underneath. To force shut down your Mac, press and hold the power button until the screen goes black. This might take 10 seconds or more; just keep holding the button. After your Mac shuts down, wait a few moments to let it cool off, then briefly press the power button again to restart it. Press your CD player's power and eject buttons down at the same time, holding them for about ten seconds. If your stereo has a "force eject" feature, it should spit out the CD. If this doesn't work, start the car and try again. Some CD players may not function when the car is turned off. On your Mac, do one of the following: Select the item to eject, then choose File > Eject. In the Finder sidebar, click the Eject button next to the item's name. On the desktop, drag the item that you want to eject to the Trash. Short answer: Probably not. Pull a USB flash drive out of your Mac without first clicking to eject it, and you'll get a stern, shameful warning: "Disk Not Ejected Properly." ... To be on the cautious side, be more conservative with external hard drives, especially the old ones that actually spin. The message "Disk Not Ejected Properly" usually appears when you unplug a cable or disconnect power to a drive without making sure the disk has unmounted from the Finder after selecting it and choosing File > Eject [Name] or clicking the Eject icon next to its name in the sidebar. When put to sleep your Mac will use a reduced amount of energy and can be 'woken' a lot quicker than the time it takes to power up a Mac that's been turned off. ... A good rule of thumb is that if you're only going to be away from your Mac for an hour or two or even overnight, letting it sleep is probably the best method. In the same support document, Apple highlights that the ideal way to shut down your Mac is via → Shutdown... in the top left corner of the menu bar, not using the power button. Here's why: Just as your Mac follows a startup process after it turns on, it follows a shutdown process before it turns off. Answer: A: Answer: A: Yes, this can damage information on a disk. Never eject a thumb drive without using Finder. Go to the Start Menu, type in Disk Management and hit Enter. Locate the external hard drive that you want to eject. Right-click on your external hard drive and select 'Eject'. Ejecting External Drive using Disk Management. To eject a disc from your Mac, do any of the following: Eject a disc from the desktop: Select the disc you want to eject, then choose File > Eject [disc]. Eject a disc from an optical drive: Press the Eject key .
